

Pull ahead in smart vehicles

Driving SAFe® agile deployment at BMW

Business Need

BMW's FG-2 IT department in Germany is responsible for backend solutions in the company's leading-edge vehicle and mobility developments. These already include smart features such as infotainment, navigation systems, function on demand and remote diagnosis, but it's a fast-evolving market where customers expect the very latest features in their luxury vehicles.

BMW needed the FG-2 department to be nimble in its response to changing consumer demands. The company was therefore looking for a way to build that into its culture, processes and technology.

Solution

We helped BMW's FG-2 IT department to implement a Scaled Agile Framework® (SAFe) as part of the company's 100% Agile initiative.

We helped introduce a SAFe Large Solution, including a complete reorganisation of processes and roles. We also provided SAFe portfolio management at the divisional manager level.

To support the conversion of projects to 80 agile teams, we ran training and coaching for FG-2's leadership, scrum masters and teams.

NTT DATA is a top 10 global business and IT services provider with more than 120,000 professionals in over 50 countries.

NTT DATA can deliver the agility you need to meet rapidly changing customer expectations.
